

Dyck Skeleton Tableau Formulas

1 Placeholder

This file will state the Dyck skeleton formula, its low-deficit range, and the known proof and conjectural statuses.

2 Computational verification

The curated checker for the rational two-column skeleton/tableau formula is recorded in

`code/check_rational_two_column_formula.py`.

It compares the direct normalized rational Dyck path side with the Type 4 skeleton/tableau formula side, grouped by (area, dinv).

The official finite checks performed for this item are:

- $t = 2$, $1 \leq n \leq 14$, elapsed time 4102.814 seconds;
- $t = 3$, $1 \leq n \leq 12$, elapsed time 25254.334 seconds;
- $t = 4$, $1 \leq n \leq 10$, elapsed time 494.131 seconds.

All three official checks passed.
